In regard to independent claim 7, the prior art taken either singly or in combination fails to anticipate or fairly suggest an illumination system comprising at least two light sources including a prism whose sides form a dihedron which a light beam enters the prism and then enters a cylindrical rod component which the beam internally reflects upon multiple times before exiting the rod lens and including two prisms as disclosed cemented to the end of the cylindrical rod component; recited together in combination with the totality of particular features/limitations recited therein.
